                                                                                         ABN90538 to ABN93374 represent Staphylococcus epidermidis open reading frame (ORF) nucleic acid sequences which encode the amino acid sequences given in ABP35124 to ABP37960, the sc epidermidis sequences have antibacterial activity and can be used in gene therapy. The sequences can also be used in the diagnosis and treatment of bacterial infections, particularly S. epidermidis infections. The sequences can be used to screen for compounds able to interfere with the S. epidermidis life
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Such conditions especially associated with HIV infection include encephalopathies, neuropathies, memory loss, dementia, depression, psychosis and opportunistic infections. The peptides act as antagonists
cycle or inhibit S. epidermidis infection. N.B. The sequence data for this parent did not form part of the printed specification, but was obtained in electronic format directly from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-AUG-1958,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Staphylococcus antibacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of gpl20-mediated neurotoxicity and subsequent neuronal degeneration. This enables therapeutic treatment of HIV infection and other inflammatory neurological diseases, including multiple sclerosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      peptides are useful for treating symptoms caused by neuronal cell loss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAY49695 and AAY49696 represent peptides which inhibit HIV-1 gp120 induced neuronal cell death.                                                                                    hybridisation assays, and are used to inhibit expression of the protein, i.e. as antisense molecules for traitment of tumours, particularly those of high metastatic potential. Cells that have been modified so that they no longer produce the protein are used to produce NeuSGC-free glycoconjugates for therapeutic use. The DNA encoding the protein is used to produce recombinant protein and detection of the gene, normally durmant, can be used to diagnose tempores. Glycoproteins that lack NeuSGC mure closely resemble human products and are suitable for long term therapy since they contain no non-random epitopes (NeuSGC-containing
                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a new isolated protein cytidine monophospho-N-acetylneuramic acid hydroxylase, which is uncontaminated by cytochrome b5 or cytochrome b5 rejuctase. The protein is produced by exogenous DNA in prokaryotic or eukaryotic cells and it catalyses conversion of CMP NewSor (NewSor and NewSor N-acetyl or glycosyl-neuraminic acid respectively). Oligonucleotides which hybridise to CMA Accessing the protein are used to take the protein acids by protein are used to take the protein acids by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New CMP N-acetyl-neuraminic acid hydroxylase and related DNA - used esp. to delete enzyme activity in mammalian cells, allowing product of glycosprotein(s) without N-glycosyl-neuraminic acid suitable for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         22-SEP-1995;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Best Local Similarity
                                                                                                                                                                                                                                                            AAW10735 represents a parcine cytidine mano phosphate (CMF) N-acetyl-neuraminic acid (CMP-Neu5Ac) hydroxylase enzyme. The enzyme catalyses the conversion of CMP-Neu5Ac to CMP-Neu5Cc (cytidine monophosphate-N-qlycoloylamiraminic acid). Antisense sequences of this STNA sequence are used for the production of CMP-Neu5Ac hydroxylase-deficient mammalian cells. The modified cells are useful for the production of recombinant glycoproteins lacking N-glycoloylaminic acid side

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           streptococcus/GBS (Streptococcus addiactiae) of group A streptococcus pyogenes), comprising one of 5483 sequences (S1), given in the specification. The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN7526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment of prevention of infection of disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27-00%-2000: 2000GR-0026333.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention provides the protein and coding sequences of a number of apoptosis associated proteins from the yeast Saccharomyces cerevisiae and the fungus Candida albicans. These can be used to identify treatments for fungal and yeast infections, for proliferative diseases and for apoptosis related diseases such as autoimmune diseases, ischaemia and neurodegeneration. The present sequence is one of the S. cerevisiae
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   and neurodegeneration.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       a newly identified mar regulated (NIMR) polypeptide activity. The method comprises contacting an NIMR polypeptide with a test compound under interaction conditions, determining the ability of the compound to modulate the activity or expression of the polypeptide, and selecting the modulators. NIMR nucleic acids and polypeptides are used in the treatment of microbial infections, and in screening for modulators of NIMR expression and activity. These modulators can be used to reduce the infectivity of a microbe on a surface, and the virulence of a microbe in a subject suffering from an infection. AAN29329-AAN29379 represent Escherichia coli NIMR amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             identifying compounds that modulate a newly identified mar regulated polypeptide activity, useful as antimicrobial compounds, involves contacting the polypeptide with a test compound \cdot
The present invention describes a purified or isolated nucleic acid sequence (I) consisting essentially of one of the 93 nucleotide sequences given in AA881202 to AA481294, where expression of the nucleic acid in a microorganism is capable of lightly proliferation of a microorganism.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAG98376;

(I) have antibacterial and antiblotic activities, and can be used in gene therapy. Expression of (I) in a microorganism inhibits proliferation of the microorganism, and the manufactured antiblotic is useful for reducing the activity or level of a gene product required for proliferation of a microorganism in a subject, specifically humans. The nucleic acids that inhibit bacterial protein or proliferation can be used as antisense therapetics for killing bacteria. It additions to therapeutic applications, the nucleic acid sequences complementary to sequences required for proliferation can be used as diagnostic tools. Sequences that are specific for particular species of microorganisms can be used as probes to identify particular species of microorganisms can be used as probes to identify particular information species in collinal species to hadellies to AAG94431, and AAAB1484 to AAAB14844 to AAAB
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                σ

                                                                       The present invention is related to a Lactococcus lactis nucleotide sequence (ABB90521) and related proteins (ABB300521). The nucleic acid sequence is useful in the Abbattin and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The invention helps research in lactic bacteria, particularly useful in the production of yogurt and cheese.

Note: The sequence data for this patent is based on equivalent patent world017334 (gublished 18-007-290) which is available in electronic format directly from WIPO at ftp.Wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Lactococous lactis IL1403.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Biosynthesis; biodegradation; lactic bacterium; yogurt; cheese

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to identifying target proteins (ABB90790-ABB94016) for herbicidally active compounds, comprising aligning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant organisms using suitable search parameters, where plant sequences having an E-value greater by a factor of 3 than the E-value of most similar non-plant sequences are selected. The polypeptides or nucleic acids encoding them are useful for identifying modulators. The identified modulators are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Identifying plant target proteins for herbicidally active compounds, comprising allyning and comparing nucleic acid or amino acid sequences from plant with nucleic acid or amino acid sequences from non-plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ABB92997 standard; Protein; 573 AA.

New isolate) modelic and deterribe reagent for detecting 1900 or more yenes from Drosophila and for elucidating cell signalling and cell-cell

Disclosure: SEO ID NO 31140: 21pp + Sequence Listing: English

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA

diagnostic amino acid sequences of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 specification, but was obtained in \simlectronic format directly from WIPO at ftp.wipo.int/published_pct_s-quences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sequences (ABL01840-ABL16175) and the encoded proteins (ABB5777-ABB72072).
                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of murations responsible for genetic disorders or other traits and to assess biodiversity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                               disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotid sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity
                                                                                                                                                                                                                                  polypeptide (II) sequences. (1) is useful as hybridisation probes, polymerase chain reaction (PDE) primers, cligomers, and for chromosome and joine mapping and in recombinate production of (II). The polymelectides are also used in diagnostics as expressed sequence tags
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ABG15393 standard; Protein; 1028 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The sequence data for this patent did not form part of the printed
               and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG00377 represent novel human
                                                                                                                     (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its buding partners are useful in medical imaging of sites expressing (II). (1) and (II) are useful for treating
                                                                                                                                                                                                                                                                                                             The invention relates to isolated (olynucleotide (I) and
